

Instructions to the students:

1. Attempt all the questions and attend the viva-voce afterwards, according to the schedule decided.

Q. No.	Question	CO. No.	Marks
1	Stress-test your designs with real users, analyze your structural decisions against your peers, and publish your entire UX journey as a professional case study. 1. Usability Testing Using your interactive prototypes, conduct usability testing with at least five real users. Document common failures. Note exactly which heuristics broke, where the friction points were, and how your system architecture held up under unpredictable human behavior. 2. Peer Benchmarking & Discussion Identify and meet with at least three other students in the course, with at least one working on a similar domain (e.g., if you are doing Hostel Complaints, talk to the other Administration/Hostel teams). Discuss the differences in your approaches. Identify why they chose a different Information Architecture or UI logic for a similar pain point, and document what you learned from their approach. Include the usability-testing, peer benchmarking & discussions in a 5-minute presentation. 3. The Behance Case Study Create a Behance profile and compile your entire proposed process into a single, comprehensive case study. Submission Checklist: • Behance Case Study URL • Slide deck prepared for the 5-minute presentation.	CO1, CO2, CO3, CO4, CO5	40

	Rubrics: - Usability Testing & Analysis (25%) - Peer Benchmarking Insights (25%) - 5-Minute Presentation (25%) - Behance Case Study (25%)

"If you wanna take full advantage of the creative potential of downtime, you have to allow yourself the space and time to get bored, but the problem is that boredom is something that is disappearing from our lives, day by day by day, and when boredom first sets in, you might feel restless or kind of unproductive and you run through the list in your head like you might have been doing earlier today, work stuff, groceries, kid stuff, mistakes you made, who to frame for those mistakes, but if you're just patient and you move past that phase and settle in, then your brain switches gears and it starts to wander and tell stories and paint pictures and suddenly, you might have an idea."

- Kyle T. Webster
